Volunteers are not paid, NOT because they are worthless, but because they are PRICELESS.

Colorado Volunteers Include:

- Health physicists
- Medical physicists
- Nuclear engineers
- Radiation protection technologists/technicians
- Nuclear medicine technologist
- Radiation therapy technologist
- Radiologic technologist (X-Ray)
- Nuclear medicine physician
- Radiation oncologist (physician)
- Radiologist (physician)
- Radiation safety officer
- General radiation safety professional
- Industrial hygienist
- Veterinarians and veterinary technicians
- Mental health practitioners
- Health educators and communicators
- Administrators and business managers
- Administrative assistants and office support
- Chaplains
- Trainers
- Supply and logistics managers
- Interpreters and translators
- Amateur radio operators
- Legal advisors
- Warehouse workers

Help Colorado develop a coordinated radiation control team to respond to radiation emergencies

The Radiation Response Volunteer Corps can make a critical impact by assisting first responders during significant radiation emergencies. Volunteers help with population monitoring, medical support and administrative, logistical and communication duties during radiation-related events.

Why does Colorado need Radiation Response volunteers?

Many individuals and groups wish to harm the United States and our country has many potential targets:

- Thousands of miles of international borders and coastlines.
- 45 major metropolitan areas, including Colorado’s Front Range.
- 1,000 international, domestic and private airports and water ports.
- 104 nuclear power plants in 31 states, three of which border Colorado.
- Many popular destinations for international travelers.
- Numerous and frequent large, public special events.

Looking for a few good people...

- Experience with radiation survey and decontamination procedures.
- Knowledgeable in and experience with reducing citizens’ concerns about health risks from radiation exposures.
- Ability to collect and interpret epidemiological information.
- Experience managing the psychological impacts on people that may develop during a radiological disaster.
- Experience with incident management principles and ability to work effectively within emergency management structures.

The Colorado Volunteer Mobilizer database helps communities throughout the state quickly identify qualified and pre-screened volunteers to assist during public health and medical emergencies.

Registration Instructions

1. Go online to covolunteers.state.co.us.
2. Select the Radiation Response Volunteer Corps as your group.
3. Complete your profile including relevant Colorado licenses.
4. Successfully complete National Incident Management System courses IS-100 and IS-700 and upcoming Radiation Response Volunteer Corps trainings.

To take the training online, create an account at www.co.train.org, then search for course identification numbers 1016070 and 1024627. Upload certificates of completion to your Colorado Volunteer Mobilizer profile.

The Colorado Volunteer Mobilizer system is used to contact volunteers by email and telephone for emergency notification and training opportunities.

The Colorado Department of Public Health and Environment verifies licenses with the Colorado Department of Regulatory Agencies and requests a background check through the Colorado Bureau of Investigation.
